Denys Taranenko

SENIOR MOBILE ENGINEER — FLUTTER · ANDROID · iOS

taranenko.denis.serg@gmail.com · linkedin.com/in/denys-taranenko-7912a9152 · idle-dt.github.io/portfolio

Fully remote · UTC+2, full EU-hours overlap · Available as B2B contractor (registered UA sole proprietor) or via EOR

PROFILE

Senior Mobile Engineer with 10+ years shipping production iOS and Android apps — Flutter-first, with three years of commercial native Android and native-layer work on both platforms. End-to-end ownership from architecture through native integrations, performance and release engineering, across crypto, video streaming, e-commerce and games. Experienced leading small mobile teams.

KEY COMPETENCIES

Flutter / Dart expertise · Native Android (Kotlin / Java) · Native Feature Integration
Cross-Platform Development · Clean Architecture · Performance Optimization
CI/CD & Release Engineering · Multi-chain Wallets · Team Leadership

PROFESSIONAL EXPERIENCE

Ice Open Network Nov 2024 – Apr 2026
Senior Mobile Engineer

Flutter app combining a decentralized social network with a multi-chain crypto wallet (20+ chains) — 100K+ Google Play installs, 4.6/5 on the App Store. iOS and Android from one codebase, weekly releases, mobile group of up to 14 engineers.

- Built a multi-chain wallet covering EVM, Solana, Cosmos and UTXO families, with a chain-agnostic send/receive pipeline handling UTXO dust, SPL accounts, memos and gas vs validator fee models.
- Built a swap & bridge engine aggregating quotes from four providers, with slippage control and automatic provider fallback.
- Worked across 30+ feature modules (Riverpod, Freezed, Melos monorepo); led a sub-team of up to 3 engineers and raised baseline code quality through static analysis and code generation.

Uscreen Jan 2022 – Sep 2024
Senior Mobile Engineer

White-label Flutter platform — one codebase powering fully branded iOS and Android apps for creators running membership and video businesses (Uscreen company-wide: 3,500+ apps launched, 15M users served). Releases every 2–3 weeks.

- Worked on internal forks of the Flutter video_player stack (platform interface, iOS AVFoundation, Android side), writing native code for deeper playback control.
- Built and maintained native in-app purchase integrations on iOS and Android powering member subscriptions inside each creator's branded app.
- Designed and implemented the Playlist feature end-to-end — user flow, design collaboration, architecture and production code.
- Collaborated on feature roadmaps, architecture and code-quality standards inside a mobile team of 6 engineers.

BuyCrypt Concurrent with Windmill Aug 2020 – Jan 2022
Senior Mobile Engineer

Multi-exchange crypto trading aggregator — Binance, Bybit and others connected via API keys and traded from one Flutter app. Team of 7–10 engineers.

- Led migration from an inconsistent MVVM pattern to a standardized BLoC architecture, with documentation and a long-term plan for the team.
- Implemented live market data over WebSockets with reconnection, backoff and UI responsiveness under high-frequency streams.
- Performance-tuned the exchange layer — concurrent streams, order placement and portfolio views without blocking the UI.

Windmill Smart Solutions Aug 2018 – Dec 2021
Senior Mobile Engineer (2019–2021) · Android Engineer (2018–2019)

- Built a Flutter e-commerce app from scratch in MVVM (Great Notion Brewing, Portland) — architecture, most features end-to-end, Unity AR integration, native push / deep links / home-screen widgets.
- Set up and maintained CI/CD in Bitrise; led a small mobile team in the final year.
- Native Android audio-wellness app (Hemi-Sync) — subscription-gated audio streaming with reliable long-session playback.

Earlier (2016–2018) — InfoArt (native Android / Unity, casual games) and a healthcare startup (solo Android, pharmacy aggregator).

HARD SKILLS

Platform: Flutter / Dart (6 yrs) · Native Android — Kotlin, Java (3 yrs) · Native iOS — AVFoundation · React Native
Architecture & Design: Clean Architecture, MVVM, BLoC, Riverpod, Freezed.
Data & Real-time: SQLite (Drift), REST APIs, WebSockets, SSE.
Native Integrations: Push notifications, deep links, in-app purchases, home-screen widgets, camera, biometrics.
Firebase: Crashlytics, Remote Config, Dynamic Links, Analytics.
Testing & CI/CD: Flutter Test, Mockito, Widget & Integration Testing · Git, GitHub Actions, Codemagic, Bitrise; Melos monorepo.
Languages: English — Upper-Intermediate (B2).

EDUCATION & CERTIFICATIONS

Master's degree, Computer Science — Dnipro University of Technology, 2013 – 2018
Speaker — Kyiv Kotlin Night 2019 · "Flutter fundamentals for Android devs"
